Subject: RE: Comments on the Hewitt SAP-QAPP

Hi Rachel - The Methods (for the various metals species) that they have proposed to use are perfectly acceptable and are exactly what I had sent to you earlier in the "SAP template". The only thing that has changed between when I sent you the template and now is having Rich Bauer explain to me a different way to obtain all of the requested analytes by asking for them differently in the Request for Analysis. He said that the EPA Method following Method 200.7/SOP 507 would differentiate all of the individual metals, but unless we asked specifically for what he referred to as "full-list" metals (and/or specifically mentioned mercury or some other particular metal of interest) that only the metals referred to on Title 22 analyses (or what was the old CLP analysis) were normally reported from the laboratory.

The way Rich explained how to obtain all of the various metals is how we are having our dissolved metals done from this sample event. The comment I made was to present an alternate way of obtaining the same results, and probably costing some less.

I would say they need to plan on being in the field on Monday.

Call if you have any questions, Andy

Andy -

It looks like the only comment CDM didn't include was to use the CLP analytical methods instead. Other than that, this looks approvable to me. Your thoughts?

Rachel

Subject: Comments on the Hewitt SAP-QAPP

John - Attached below are the comments to the SAP-QAPP for the Hewitt Landfill groundwater sampling. Feel free to call me or Andy Austin of E-2 Consulting Engineers (303/337-5139), if there are questions.

Thanks,

Rachel
